

SMART INDIA HACKATHON 2026

LAND2BIZ

Personalized Rural Entrepreneurship & Business Guidance Platform

- **Problem Statement ID – 26091**
- **Problem Statement Title - LAND2BIZ**
- **Theme- Rural Development**
- **PS Category- Software**
- **Team ID-**
- **Team Name - StarkForge**

PROBLEM :

- First-time rural entrepreneurs pick a business on **word-of-mouth**, not data they cannot judge local demand, competitor density, the right investment size, or which government loan scheme actually fits them.

OUR IDEA :

- LAND2BIZ** takes a user's **land, location, capital and goals** and tells them what business is realistically feasible there, **why**, what it will cost, and **what government support applies** — before a rupee is invested

PROPOSED SOLUTION :

- Site Intelligence — population, road access and nearby institutions pulled from Google Places, OSM and Census APIs
- Market Gap Analysis — flags underserved local needs instead of just the most popular business
- Explainable Business Ranking — every score broken into visible sub-scores (site, demand, finance, risk)
- Financial Calculator & Scheme Router — project cost, EMI and matching loan scheme, computed by pure rule-based code

INNOVATION/UNIQUENESS :

- Land-aware — the recommendation is grounded in this specific land parcel, not a generic business category
- Orchestration — connects site data, market data, finance and government schemes into one explainable chain that no single existing tool covers

Tech Stack & Data Sources

- **Frontend:** React, mobile-first multi-step form + Tailwind CSS
- **Backend:** FastAPI orchestration engine running the M0–M13 pipeline
- **Site & market data:** Google Places API + OpenStreetMap Overpass API
- **Demand baseline:** Census 2011 (growth-adjusted) + NSSO/PLFS
- **Financial engine:** rule-based EMI/loan formulas — zero AI, 100% deterministic
- **Scheme dataset:** curated PMEGP / Stand-Up India / state scheme JSON
- **AI layer:** LLM used only to narrate rankings — never to compute numbers
- **Deployment:** Render (backend) + Vercel (frontend)

FLOW CHART :

3-LAYER TRUST APPROACH :

Ground-Truth Verification *entrepreneur physically confirms on-site*

AI Reasoning *explainable scoring & narrative only*

Verified Data *APIs, Census, deterministic formulas*

Feasibility

Existing Loan Structure

10% margin / 90% loan —
no new framework

Free Public APIs

Places, OSM, Census —
no paid licences

Zero Hallucination Risk

Financial engine is pure
rule-based code

Explainable Compliance

Regulatory checks run as
a rule-based list

Commercial Feasibility

Agency-Ready

NBCFDC / NSFDC /
NSTFDC & state missions

Cuts Field Workload

Less manual advisory load
on staff

Complements, Not Replaces

Plugs into myScheme /
Udyam

Scalable Rollout

District-by-district, same
pipeline

Challenge → Mitigation Strategy

No unified India-wide
zoning/land-use API

Rule-based regulatory
checklist (not exhaustive)

Rural users need
low-literacy access

Mobile-first UI now;
voice interface roadmap

Census 2011 data is
over a decade old

Growth-adjust with state
rates; cross-check live proxies

Government scheme
rules change over time

Curated dataset with
periodic manual refresh

KEY IMPACT

Better Choice

Evidence-based land & business selection

Lower Risk

Financial feasibility checked before commitment

Unlock Land

Turns idle land into a real opportunity

Confident Commitment

Recommendation user-verified before investing

BENEFITS CHAIN

Real Data

Business Fit

Financial Fit

Ground
Verify

Confident
Action

PRIMARY BENEFICIARIES

Rural & Semi-urban
Entrepreneurs

Micro-enterprises & Local
Businesses

Lenders & Government
Schemes

- SIH Problem Statement 26091 — official SIH portal
- myScheme — government scheme discovery — myscheme.gov.in
- Udyam Registration — MSME registration fields — udyamregistration.gov.in
- NABARD Model Project Reports — rural project cost baselines — nabard.org
- Census 2011 (growth-adjusted) + NSSO/PLFS — demand & purchasing-power data
- Google Places API + OpenStreetMap Overpass — live site & competitor data
- VIIRS night-light data — economic-activity proxy
- RBI priority-sector-lending circulars — loan/scheme rules
